

Overview: Comprehensive requirement analysis capturing functional capabilities, non-functional performance benchmarks, compliance requirements, and user personas for the LegalEase platform.

1. EXECUTIVE REQUIREMENT OVERVIEW

This Requirement Analysis Specification translates high-level business goals into precise functional and non-functional engineering standards for LegalEase, ensuring scalability, security, and legal compliance across all operational workflows.

1. CORE USER PERSONAS & USE CASES

- **Managing Partner / Legal Executive:** Requires oversight dashboards, practice analytics, compliance auditing, and team permission controls.
- **Associate Attorney / Senior Drafter:** Needs automated contract redlining, clause comparison, AI research tools, and rapid dynamic document generation.
- **Paralegal / Legal Assistant:** Uses automated client intake portals, document OCR scanning, metadata extraction, and workflow status tracking.
- **External Client / Signatory:** Requires secure portal access for document submission, identity verification, and e-signature execution.

2. FUNCTIONAL REQUIREMENTS (FR)

- **FR-1 Document Parsing & OCR:** Extract text, tables, and signature fields from PDF, DOCX, and scanned image files with multi-language support.
- **FR-2 AI Contract Review & Redlining:** Automated risk identification against predefined playbook standards, flagging anomalous clauses and offering fallback recommendations.
- **FR-3 Dynamic Template Engine:** Form-based variable injection into standardized legal templates, maintaining formatting and auto-numbering.
- **FR-4 Workflow & E-Sign Integration:** Native e-signature request routing with automated reminder triggers, audit logs, and status webhooks.
- **FR-5 Role-Based Access Control (RBAC):** Granular permissions restricting document access based on user role, matter involvement, and firm tier.

3. NON-FUNCTIONAL REQUIREMENTS (NFR)

- **NFR-1 Security & Data Isolation:** AES-256 bit encryption at rest, TLS 1.3 in transit, and complete tenant database/schema isolation.
- **NFR-2 Performance & Latency:** Document processing response time < 3 seconds for standard files (< 50 pages) and query responses within 1.5 seconds.
- **NFR-3 Availability & Reliability:** 99.9% uptime SLA with automated multi-region backup failovers and zero data loss architecture.
- **NFR-4 Regulatory Compliance:** Strict adherence to SOC 2 Type II, GDPR, HIPAA, and state-level legal privilege retention mandates.

4. SYSTEM CONSTRAINTS & DEPENDENCIES

- **External API Dependencies:** Cloud OCR engines, LLM API endpoints, e-signature provider APIs (DocuSign/Adobe Sign), and payment gateways.
- **Browser & Device Support:** Native cross-browser compatibility (Chrome, Firefox, Edge, Safari) with responsive desktop and tablet layouts.
- **Legacy Data Migration:** Automated batch import pipelines for existing client files, legacy Word documents, and metadata CSVs.
